

Wastewater drug testing in New Zealand: Quarter 1 findings

Sample site overview

Notes: (1) Graphs below illustrate the average proportion of drug use detected within catchment areas; which aims to highlight the difference in patterns of drug use throughout New Zealand.
 (2) Baseline usage across drug types and sample regions is unclear at present, but will become evident in due course as testing continues. Therefore, cautious interpretation is advised.

Methamphetamine

MDMA/Ecstasy

Cocaine

Fentanyl
