

Wastewater drug testing in New Zealand: Quarter 2 findings

Sample site overview

Notes: (1) Graphs below illustrate the average proportion of drug use detected within catchment areas; which aims to highlight the difference in patterns of drug use throughout New Zealand.
 (2) Quarter 2 covers the three-month period between February and April 2019, whereas quarter 1 covered November 2018 to January 2019.
 (3) Baseline usage across drug types and sample regions is unclear at present, but will become evident in due course as testing continues. Therefore, cautious interpretation is advised.
