

Wastewater drug testing in New Zealand: Quarter 3 findings

Notes: (1) Graphs below illustrate the proportion of drug use detected within catchment areas during Quarter Three; which aims to highlight the difference in patterns of drug use throughout New Zealand.
(2) Quarter Three covers the three-month period between May and July 2019
(3) Baseline usage across drug types and sample regions is unclear at present, but will become evident in due course as testing continues. Therefore, cautious interpretation is advised.
